

SALASARTAN SA-TD

Classification :

SALASARTAN SA-TD is a universal Retanning agent and auxiliary for anionic products.

Properties:

- SALASARTAN SA-TD is an auxiliary syntan. Leathers retanned with Salasartan SA-TD can be more uniformly dyed, due to its high dispersing power. It reduces the affinity of anionic dyes for mineral tanned leather, thus the dyes go into the leather fibre more slowly, resulting in more levelled shade with penetration through out cross section.
- Since it imparts good level dyeing, specially recommended for nubucks or suedes leather to get even dyeing.
- It improves dispersion of vegetable and resin tanning in less duration. It also helps for better distribution of Protein filler in low density fibre area when used along with protein filler.

Characteristics :

Chemical Composition	: Salt of Naphthalene sulphonic acid condensation product
Appearance	: Light brown free flowing
Active matter	: 95% +/- 2%
pH of 10% solution	: 7.5 – 9.5

Indications for application:

- 0.50 % - 1.00 % to be added 10 minutes prior to dye addition as Dye-Leveling agent.
- 1.00 % - 1.50 % to be added with vegetable tannage or during retannage.
- 0.50 % - 1.00 % to be added during the last 10 minutes in fat-liquoring operation before acidification for better exhaustion of fat-liquors,

Shelf Life / Storage Stability:

One year if stored properly at ambient temperature in supplied packing.

Packing Available in:

25 Kgs HDPE Bag.
