

SALASARTAN - SNUFF

(synthetic organic tanning agent for corrected grain leather)

Classification :

SALASARTAN – SNUFF generally used for retanning chrome leathers. The buffing properties of the leather is substantially improved

Properties:

- SALASARTAN -SNUFF penetrates deeply into the leather. It levels out dyeing without rendering them paler to any large extent. Moreover the buffing properties of leather is substantially improved.
- It is primarily used for retanning full grain leather. Its mildly neutralizing effect is particularly beneficial, because the veg tannings that are incorporated ,penetrate more deeply and exert a stronger filling effect, hence they load the grain less than usual and thus give finer pores.

Characteristics :

Chemical Composition	: Synthetic organic tanning agen
Appearance	: Light brown powder
% Moisture content	: 5.0 max
Active Matter	: 95% min
pH (10% Dilution)	: 6.5 – 7.5
Solubility	: Readily soluble in water

• Application:

Light and medium weight leathers are drummed with 3-5% of SNUFF to get the desired effect

Packing Available in:

(Powder) 25 Kgs. HDPE Bag
